## HVS U.S. Hotel Franchise Development Cost Guide

## Summary of Total Hotel Development Costs

The purpose of this U.S. Hotel Franchise Development Cost Guide, prepared by HVS, is to provide a summary of the total development cost ranges, exclusive of land, that are applicable to various hotel franchise brands as described in their respective Uniform Franchise Offering Circular (UFOC) documents. This guide can be utilized by real estate professionals as a supplement to the HVS Development Cost Survey in assessing total hotel development costs in the context of specific hotel franchise brands. Furthermore, it can also be utilized by hotel developers and investors as a supplement to the HVS U.S. Hotel Franchise Fee Guide to help them analyze the various costs involved in developing a hotel that is to be flagged with a franchised brand. We note that the cost ranges outlined herein apply only to hotel development in the United States.

The total development cost ranges and corresponding calculated midpoints summarized in Tables 1, 2, and 3 were derived from information presented in the UFOC documents of each respective brand; these figures are exclusive of land cost, as land cost is too variable to estimate. Table 1 summarizes the data for hotel brands in the economy category, which includes brands classified as such by Smith Travel Research (STR). Table 2 presents data for hotel brands in the mid-rate category, which encompasses brands classified by STR as being in the mid-scale without food and beverage, and mid-scale with food and beverage categories. Table 3 summarizes data for hotels in the first-class category, which includes brands classified by STR as upscale, upper-upscale, or luxury brands. Our summary includes a total of 91 franchise brands, comprising 29 economy, 33 mid-rate, and 29 first-class brands. The overall total and the totals per segment include brand variants: for example, Comfort Inn \& Suites is a variant of Comfort Inn, and Crowne Plaza Resort is a variant of Crowne Plaza.

We note that the total development cost ranges and corresponding midpoints, exclusive of land, were sourced from the most recently released UFOC documents available at the time of the guide's production; these documents were primarily released in 2006. However, four economy brands
(Motel 6, Studio 6, Red Roof Inns, and GuestHouse) reflect data from 2007 UFOC documents; these brands are referenced with a footnote within the guide. Aside from land cost, these total development cost ranges may also be exclusive of other development cost components that the franchisors have opted not to include due to the challenges involved in their estimation. Furthermore, the total hotel development cost ranges, exclusive of land, are based on cost estimates for the construction of new hotels. Therefore, these cost ranges cannot be utilized for evaluating the development costs involved in the conversion of independent hotels to certain hotel brands, or the conversion of branded hotels to other brands. The development cost ranges, exclusive of land, are also expressed on a per-room basis in the tables. The per-room ranges were computed by dividing the lower and upper limits of the ranges of the total development cost amounts by the corresponding number of rooms that were indicated by the respective franchisors in the UFOCs. These room counts were used by the respective franchisors as their basis for cost estimation. Some franchisors have opted to indicate a range of rooms instead of a specific room number. In these cases, we have divided both the lower and upper limits of the development cost ranges by the lower limits of the room ranges to derive the per-room ranges. This method results in more conservative computations that minimize the reflection of economies of scale. Finally, a midpoint figure, calculated from the summary per-room cost range data sourced from the UFOC documents, is given for each brand's corresponding development cost within each category.

The following table summarizes the total development cost ranges and corresponding midpoints, exclusive of land, for economy hotels.

[^0]As indicated in the preceding table, the room counts used by franchisors of economy hotels for their basis in estimating total development cost, excluding land, range from 40 to 100 rooms. Expressed on a per-room basis, the total development cost, excluding land, for economy hotels range from $\$ 27,000$ to $\$ 82,000$, while the per-room midpoint calculations range from $\$ 36,000$ to $\$ 65,000$.

The following table sets forth the total development cost ranges, exclusive of land, for mid-rate hotels.

As indicated in the preceding table, the room counts used by franchisors of first-class hotels for their basis in estimating total development cost, excluding land, ranged from 80 to 300 rooms. The total development cost, excluding land, range from $\$ 66,000$ to $\$ 376,000$ per room for first-class hotels, with corresponding calculated per-room midpoints ranging from $\$ 79,000$ to \$281,000.

## Summary of Improvements Costs

Improvements include all buildings and other relatively permanent structures located on, or attached to, a parcel. The cost of the improvements includes the cost of materials, fees, and labor to construct the hotel's improvements. Tables 4, 5, and 6, which follow, summarize the various building construction cost ranges as reflected in the UFOCs of hotel brands that we analyzed. We note that some building cost ranges, as provided by UFOCs, may or may not reflect the cost to construct site improvements, as well as other costs typically associated with the construction of building and site improvements. The same methodology and assumptions applied to the per-room computation of total hotel development costs, as summarized above, were applied to the per-room computation of improvements costs. Similarly, the costs summarized below reflect the estimates applicable for new hotel construction and are not necessarily applicable to brand conversion scenarios.

The following table summarizes the improvements cost ranges for economy hotels.

As indicated in the preceding table, the room counts used by franchisors of economy hotels for their basis in estimating improvements cost ranged from 40 to 100 rooms. Expressed on a per-room basis, the improvements cost for economy hotels range from $\$ 15,000$ to $\$ 52,000$. The corresponding midpoints of these ranges vary from a low of $\$ 23,000$ per room to a high of $\$ 42,000$ per room.

The following table outlines the improvements cost ranges for mid-rate hotels.

As indicated in the preceding table, the room counts used by franchisors of first-class hotels for their basis in estimating improvements cost range from 80 to 300 rooms. Improvements cost range from $\$ 50,000$ to $\$ 300,000$ per room for first-class hotels, and the calculated midpoints of the per-room cost ranges varies from $\$ 55,000$ to $\$ 223,000$.

## Summary of Furniture, Fixtures, and Equipment Costs

Furniture, fixtures, and equipment (FF\&E) include all non-permanent, removable items at a hotel, such as guestroom furnishings, kitchen equipment, and items of decor. The cost of the FF\&E, and all the fees associated with installing and furnishing the items in a hotel, constitute the total cost of the furniture, fixtures, and equipment. Tables 7, 8, and 9, which follow, summarize the various FF\&E cost ranges as reflected in the UFOCs of hotel brands that we analyzed. We note that some FF\&E cost range estimates may or may not reflect all the various types of FF\&E, as well as some costs that are typically associated with installing and furnishing the FF\&E items. This is attributable to the fact that FF\&E is not standard from brand to brand, and certain brands choose to outsource laundry or kitchen operations, for example, and therefore do not include such equipment in their FF\&E cost estimates. The same methodology and assumptions applied to the per-room computation of total hotel development costs, as summarized above, were applied to the per-room computation of FF\&E costs. Similarly, the costs summarized below reflect the estimates applicable for new hotel construction and are not necessarily applicable to brand conversion scenarios.

The following table summarizes the FF\&E cost ranges for economy hotels.

This table illustrates that the room counts used by franchisors of economy hotels for their basis in estimating FF\&E cost range from 40 to 100 rooms. Expressed on a per-room basis, the FF\&E cost for economy hotels range from $\$ 3,000$ to $\$ 18,000$, with a midpoint range of $\$ 4,000$ to $\$ 16,000$.

The following table sets forth the FF\&E cost ranges for mid-rate hotels.

The budgeting process for the development costs involved in the construction of new franchised hotels is a very crucial phase in conducting feasibility studies for proposed development projects of branded hotels. This document is one of the resources involving development cost for the construction of new franchised hotels that are available to the public. Using the information in this document as a preparatory guide, developers can further research the more detailed cost estimates that are pertinent to their particular proposed development project and determine its overall estimated development cost.

Estimating total development costs for a proposed branded hotel involves exhaustive research and investigation by a developer. The HVS U.S. Hotel Franchise Development Cost Guide was developed with the intention of providing a summarized reference of development cost ranges as illustrated in various UFOCs that were released in 2006. This document does not provide detailed descriptions and explanations of the various items that constitute the development cost of newly constructed branded hotels. Therefore, the document should be relied upon only as a preliminary resource. We advise developers and other users of this data to contact the respective franchise representatives and request the most updated and detailed information regarding development cost. We do not warrant the accuracy of the data contained in this summary. The data were obtained from the various UFOCs prepared by each franchisor, and these documents are assumed to contain accurate information.
